BOOKS FOR CHILDREN.

Is not the food which you give to your child's mind of as much importance as that which you give to his body?

When your boy stops questioning you, he has not stopped questioning concerning life and its problems; he has turned to those silent companions which you have placed upon his book shelf or on the library table. Shall heroes and prophets be his counsellors, or shall "Peck's Bad Boy" and the villain of the dime novel teach him how to look at life? *It rests with you.*

There is a great difference between books which are to be read *to* children, those which are to be read *with* children and those which are to be read *by* children.

The second kind, which are more profitable than the first, require the mother's sympathetic and genuine interest in the subject matter in hand; and

frequent stops for little talks about what has been read are necessary.

The third class are books for older children who can read well enough to peruse them alone, but if the mother will take time to read them before giving them to the child she will strengthen the bonds of intellectual sympathy between herself and him.

LIST No. 1.

FOR CHILDREN UNDER SIX YEARS OF AGE.

Child Life, - - - - -	<i>by F. G. Whittier</i>
Child's History of England, - - - -	<i>by Chas. Dickens</i>
Spinning Wheel Stories, - - - - -	<i>by Louise M. Alcott</i>

Boyhood is pre-eminently the period of perception. Hence all books on scientific subjects are helpful, if they are simple enough to aid the child in seeing nature and her marvels. The mother should be careful that the child does not rest in mere perception of the objects of nature, but that he compares and classifies them, and, above all, that he is led to trace a purpose in created things, in order that he may learn "to look through nature up to nature's God."

LIST OF CHILDREN'S BOOKS ON SCIENTIFIC SUBJECTS.

The Story Mother Nature Told, - - -	<i>by Jane Andrews</i>
Child's Book of Nature (3 vols.) -	<i>by Worthington Hooper</i>
Among the Stars, - - - - -	<i>by Agnes Giberne</i>
History of a Mouthful of Bread, - - -	<i>by Jean Mace</i>

Overhead, - - - -	by <i>Laura and Anna Moore</i>
Life and Her Children, - - -	by <i>Arabella Buckley</i>
Winners in Life's Race, - - -	by <i>Arabella Buckley</i>
Fairyland of Science, - - -	by <i>Arabella Buckley</i>
Little Folks in Feathers and Furs,	by <i>Olive Thorne Miller</i>
Queer Pets, - - - -	_____
Little Lucy's Wonderful Globe,	by <i>Charlotte M. Yonge</i>
Four Feet, Two Feet, and No Feet,	_____
Odd Folks at Home, - - - -	by <i>C. L. Mateaux</i>
Tenants of an Old Farm Yard, - - -	by <i>McCook</i>
Home Studies in Nature, - - - -	by <i>Mary Treat</i>

Many other valuable books might be added to this list. However, a few good books are better than many less good ones. It is well to lead a child to the world's *great books* as soon as possible. Enough have been given to show the kinds of books which are not hurtful to children. Each book on the above list has been personally inspected.

After all it is not so important what your child reads as what you read. If the father reads *nothing* but the newspapers and the mother *nothing* but novels, what then? Children are taught as much by the general tone of conversation of their parents as by the books they are given to read.

A LIST OF BOOKS HELPFUL TO MOTHERS AND TEACHERS IN
THEIR STUDY OF CHILD NATURE.

- Mother-play and Nursery Song, - by *Frederick Froebel*
 The Child, - - - by *Madam Marenholtz von Bulow*
 Household Education, - - - by *Harriet Martineau*
